

LEGNOLANDIA

built by nature

ECO-SKATE PRODUCT RANGE

Design

Attractive Product Range

Quality Certified

Durability and Safety

TOTAL QUALITY SYSTEM

CUSTOM DESIGN

Legnolandia proposal includes the design that best suits your needs, with graphic 3D representations of the positioning of the ramps, with respective distances of use and safety.

The design considers the following basic requirements:

- purchase budget
- features of the area – type of user
- age of users
- reference standards

QUALITY AND DURABILITY

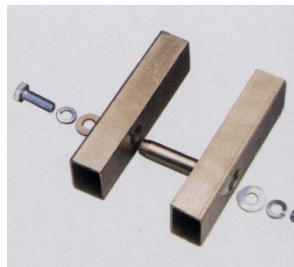

ECO-SKATE products provide maximum guarantee in terms of quality of materials, safety standards, functionality and durability. These facilities are manufactured with modern and exclusive technologies, using high quality materials. Furthermore these products are very robust and stable, but at the same time extremely light compared to the solutions in concrete, for this reason they can be laid on terraces, flat roofs or raised floors.

FAST AND ACCURATE INSTALLATION

ECO-SKATE product range is completely modular and equipped with fast connections, accurate and durable. They can be dismantled and reassembled even on not perfectly flat grounds, thanks to the special support feet with adjusting screws. These structures are expandable also in a second time for any planned investment. Installation is simple and fast and does not require casting concrete.

SAFETY

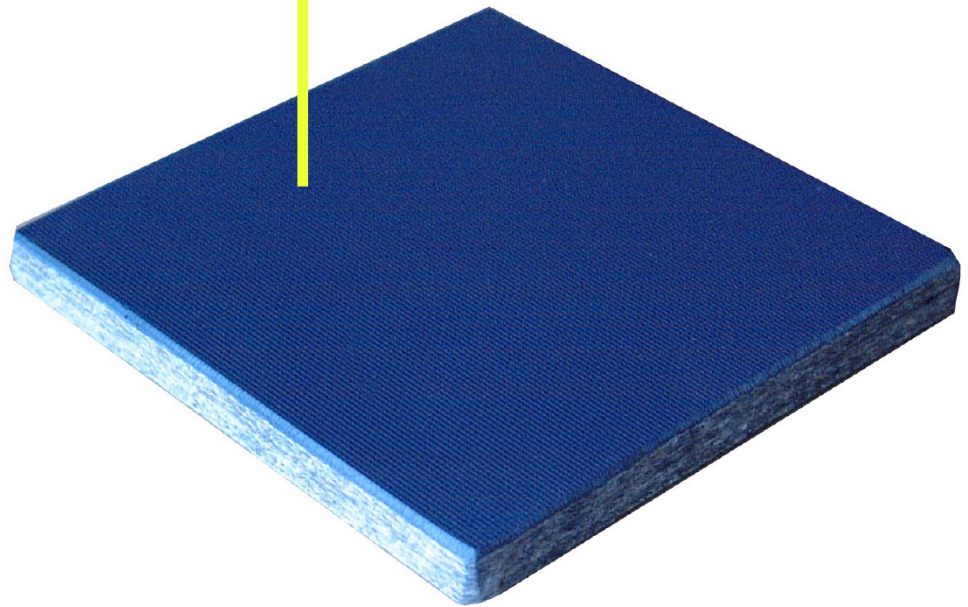

ECO-SKATE products are supplied with security certificate. It is also possible to arrange inspection and maintenance contracts, for possible, even if improbable, damage. With more than 1000 skate parks installed, we have access to a wide experience and understanding of customer needs from large constructions to small.

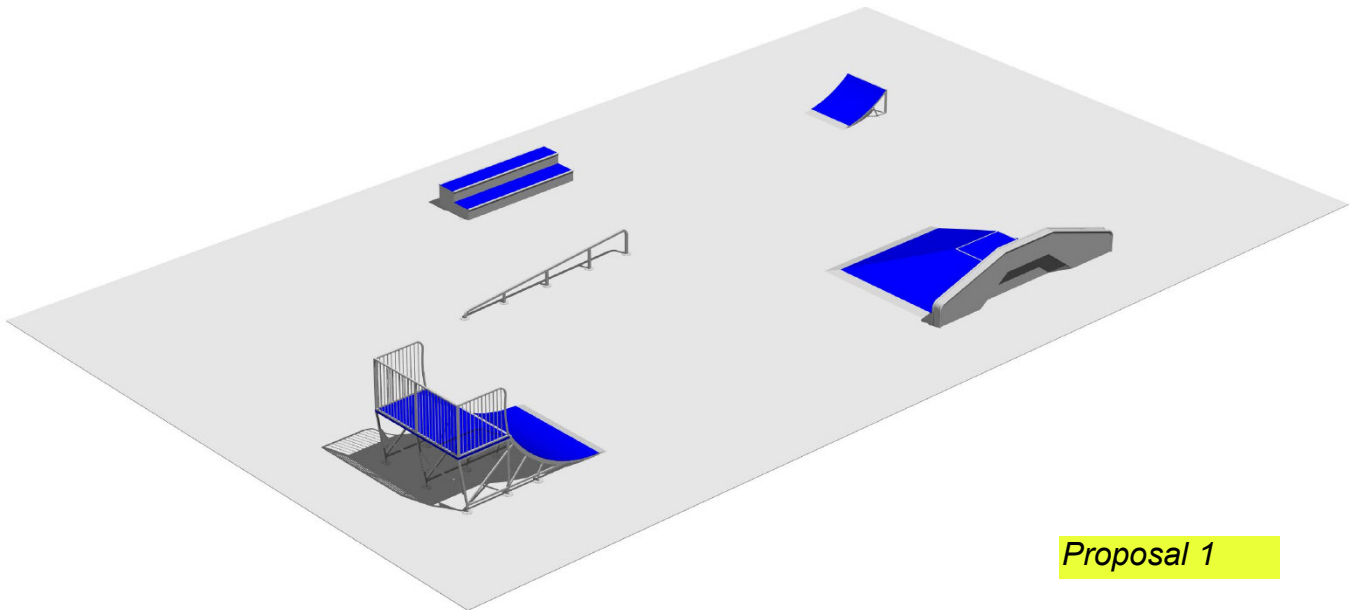

COMPOSITE MATERIAL OF CONSTRUCTION

PLATE THICKNESS 9mm

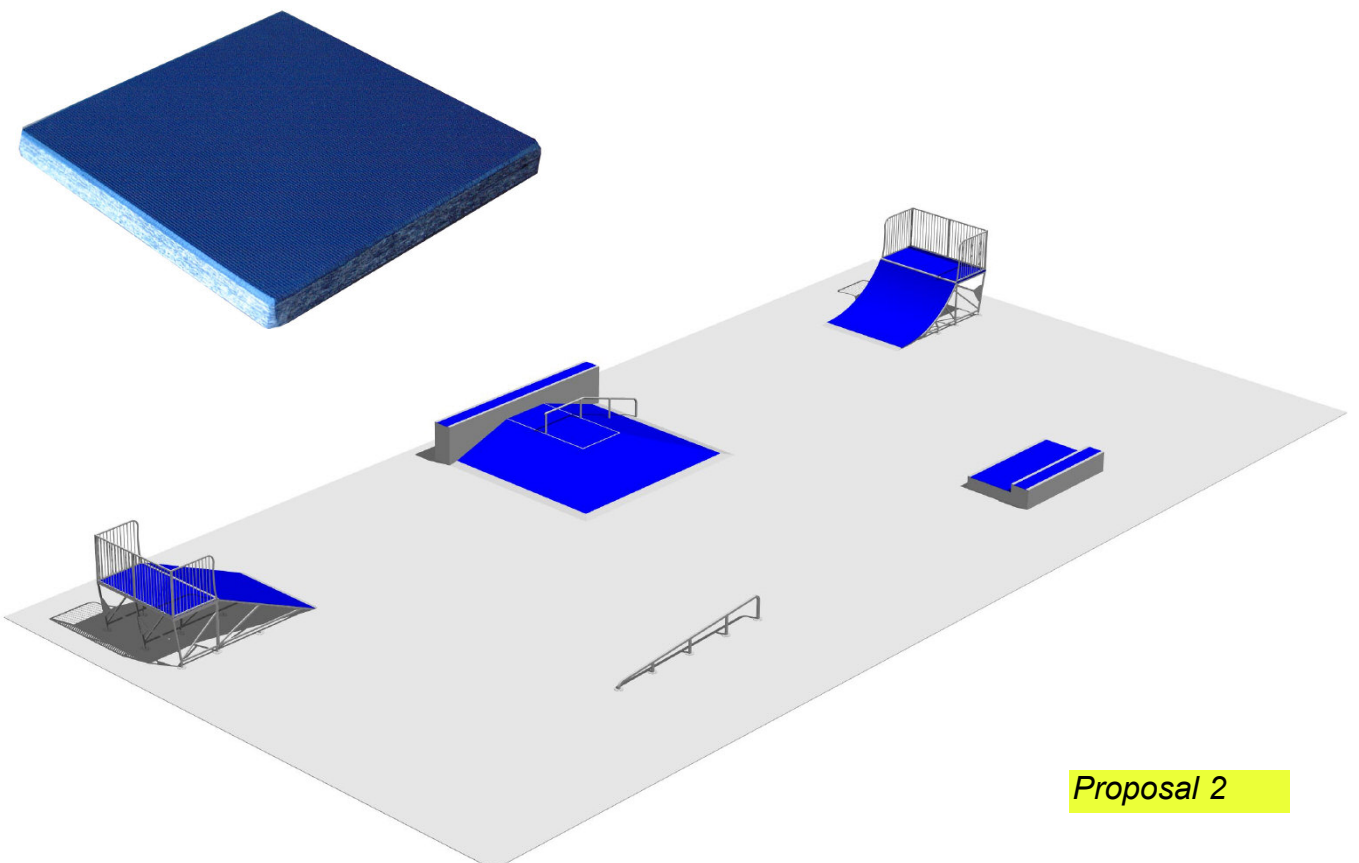

- 100% U.V. resistant
- 100% frost resistant
- anti shock function
- wear resistant
